AI Foundations Workshop

I would like to acknowledge the Traditional Custodians of the land on which we meet today, and pay my respects to Elders past, present and emerging. In the Finley and Berrigan Shire region, this is often recognised as the Country of the **Wiradjuri people**.

We acknowledge their continuing connection to the land, waters, skies and community, and recognise that this connection has been maintained through countless generations.

We honour the knowledge, culture and contributions of First Nations peoples and extend that respect to all Aboriginal and Torres Strait Islander peoples joining us today.

Introduce yourself to your fellow students… in 30s

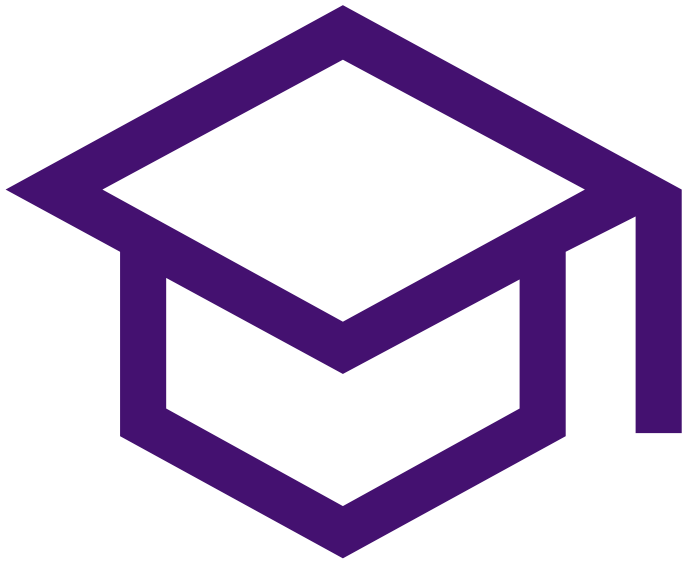

Name ?

One interesting fact about you?

Why are you here today ?

Workshop at a Glance

Workshop duration: 3 hours, including one break

Be curious and participate

Ask questions anytime

Think practical first

Course topics

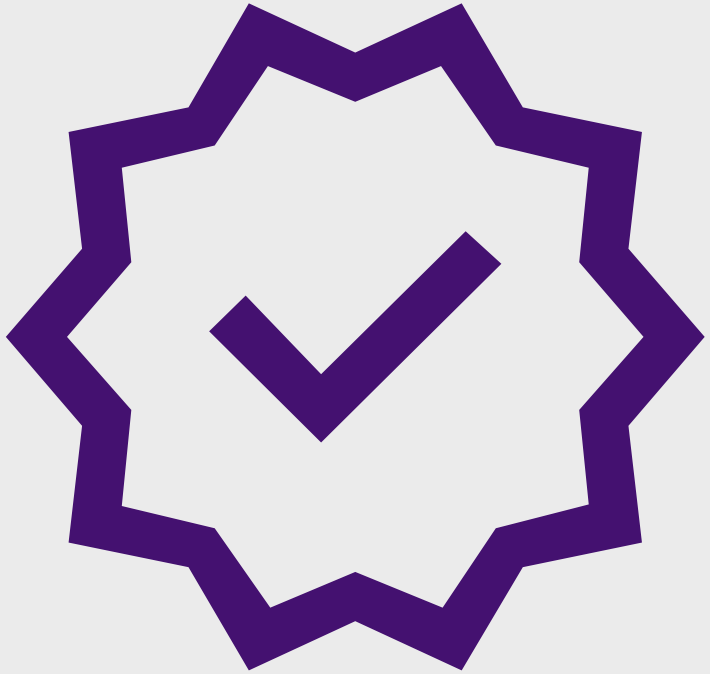

1. What is AI?
2. Effective Prompting
3. AI Application
4. Creating Content with AI
5. AI Safety, Privacy, & Ethics

What are we covering today?

Learning Outcomes

1. Explain AI concepts and everyday applications.
2. Identify practical workplace and community AI uses.
3. Craft effective prompts using key parameters.
4. Draft and adapt content using AI tools.
5. Evaluate AI outputs for accuracy, bias, and risk.
6. Apply human oversight and plan responsible next steps.

You should be able to…

AI Demo

AI Familiarity

Quick Activity: My AI Experience

Turn to the person next to you and share:

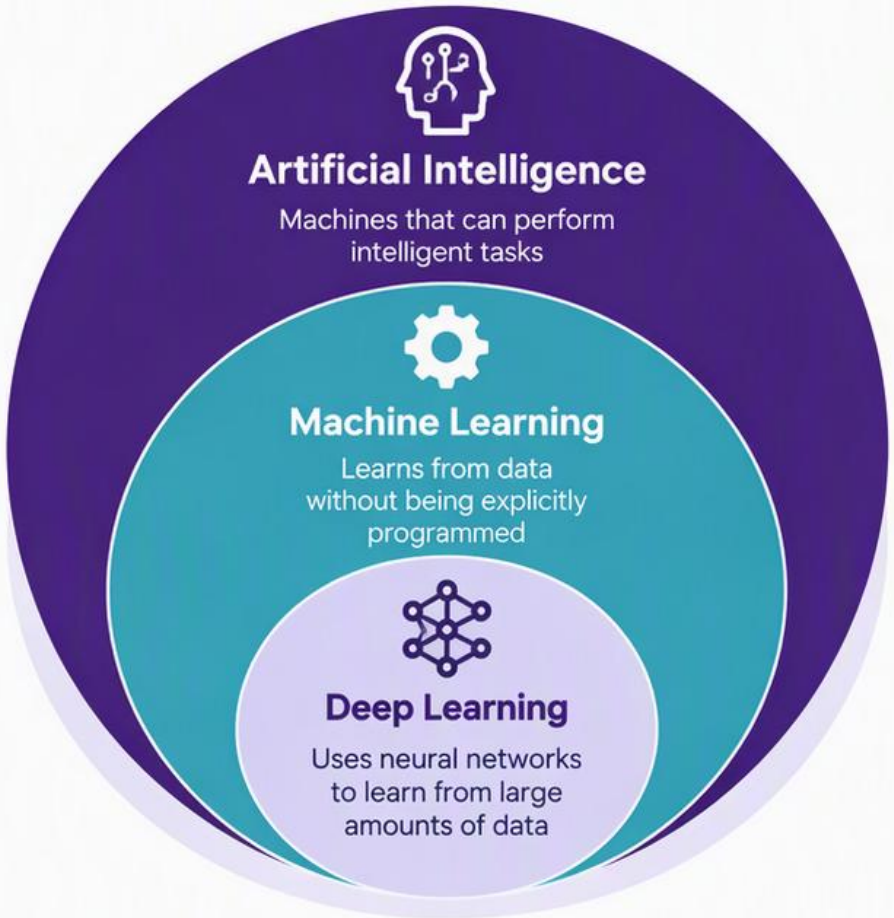

1. **Have you tried any AI tools yet?**
2. **Where do you already see or use AI in daily life?**
3. **What is your main hesitation or question about AI?**

What Is AI?

The AI Landscape

How it all fits together

Generative AI

Creates new content (text, images, audio, video)

Large Language Models (LLMs)

A type of Generative AI trained on massive amounts of text data

Chatbots

User-friendly interfaces built on LLMs (e.g. ChatGPT, Copilot)

Most modern chatbots are powered by LLMs, which are a form of Generative AI built using Deep Learning techniques.

Artificial General Intelligence (AGI)

Human-level intelligence across a wide range of tasks

Superintelligence

Intelligence that surpasses human capabilities

Potential future stages

AI is a broad field. Machine Learning and Deep Learning are ways to build AI. Generative AI creates new content, LLMs are a form of Generative AI, and chatbots make LLMs accessible. AGI and Superintelligence are future possibilities.

AI in Everyday Life

You might already be using it ...

AI learns patterns from data and uses those patterns to predict, recommend, detect or generate what is most likely to come next.

Quick Activity: Is It AI?

Decide whether each example is AI or automation:

- ❑ Spam email filter
- ❑ Google Maps route prediction
- ❑ Automatic vacuum cleaner
- ❑ Face unlock on a phone
- ❑ Weather forecasting app
- ❑ Farm drone identifying crop stress
- ❑ Livestock monitoring sensor
- ❑ Automatic irrigation system on a timer
- ❑ Smart irrigation system adjusting to weather forecasts
- ❑ Tradie's quoting template in Excel

Examples of Generative AI Tools

Microsoft Copilot

- Workplace productivity, drafting emails, analysing documents, and working MS 365
- Used by organisations already using MS 365

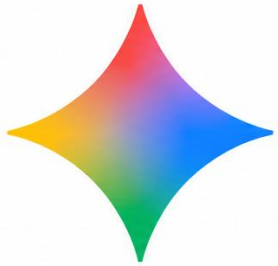

ChatGPT

- General-purpose writing, brainstorming, learning and problem-solving
- Used by Individuals, students, and professionals

Adobe Firefly

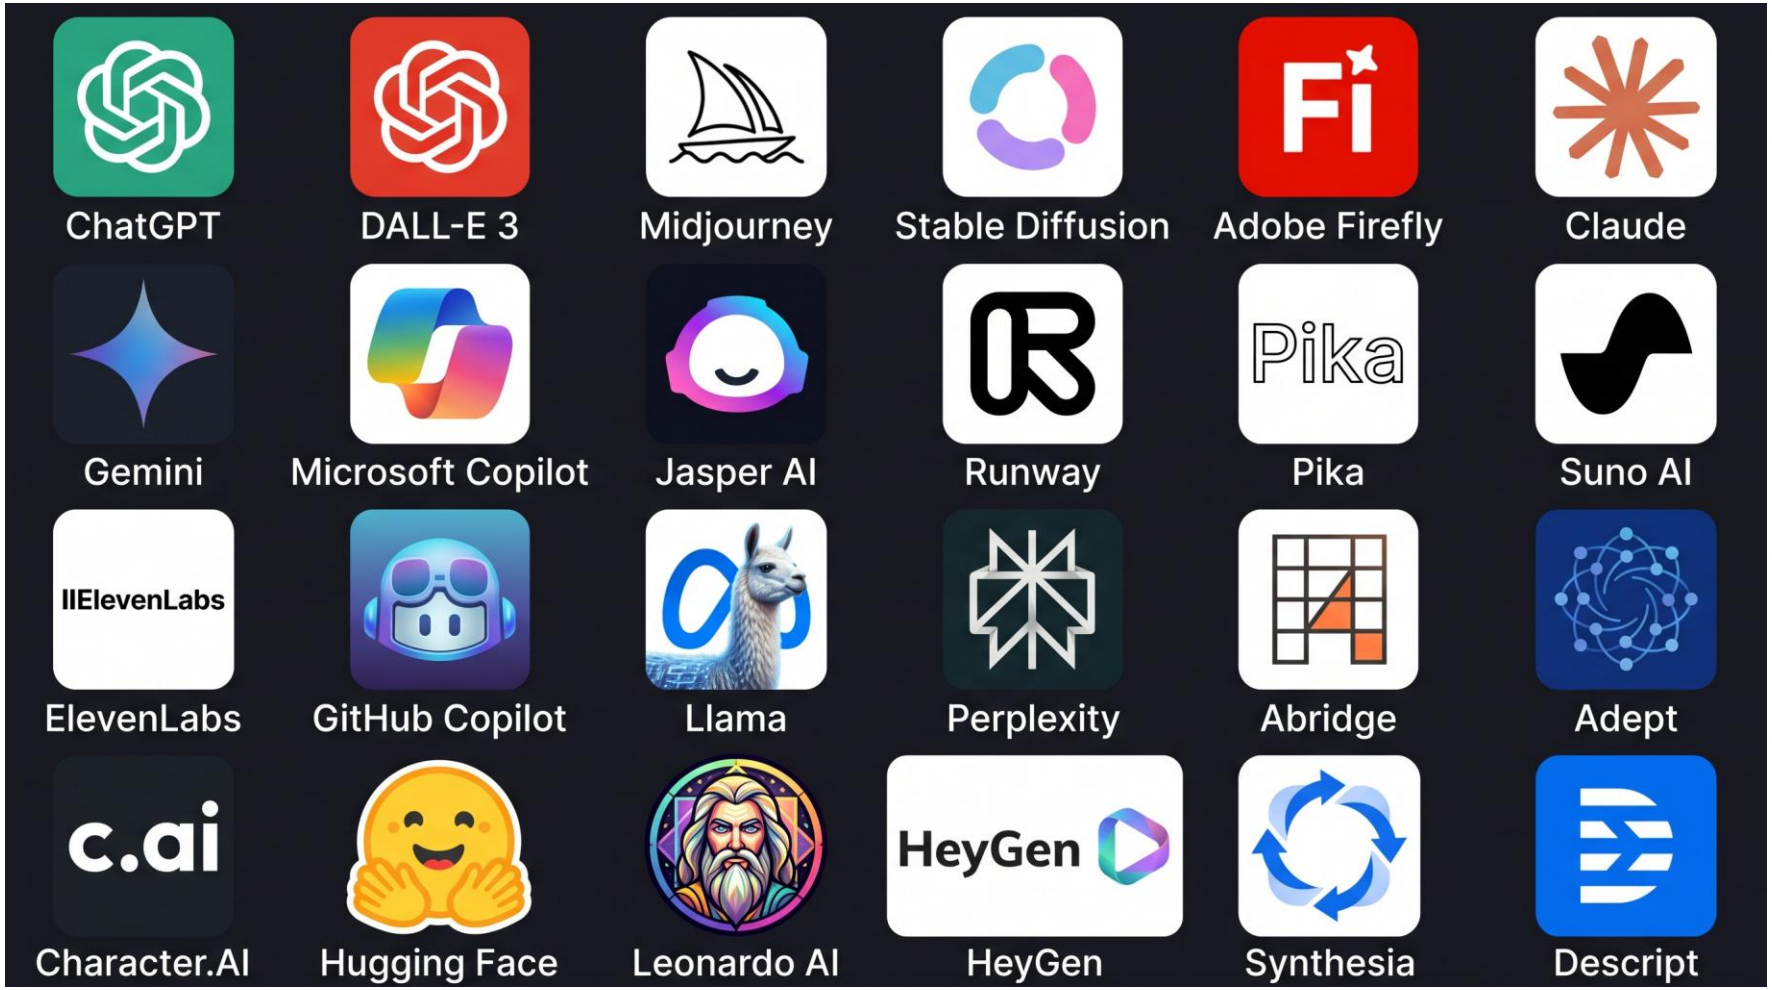

- Generating and editing videos, images, graphics, and creative assets
- Used by designers, marketers, and content creators

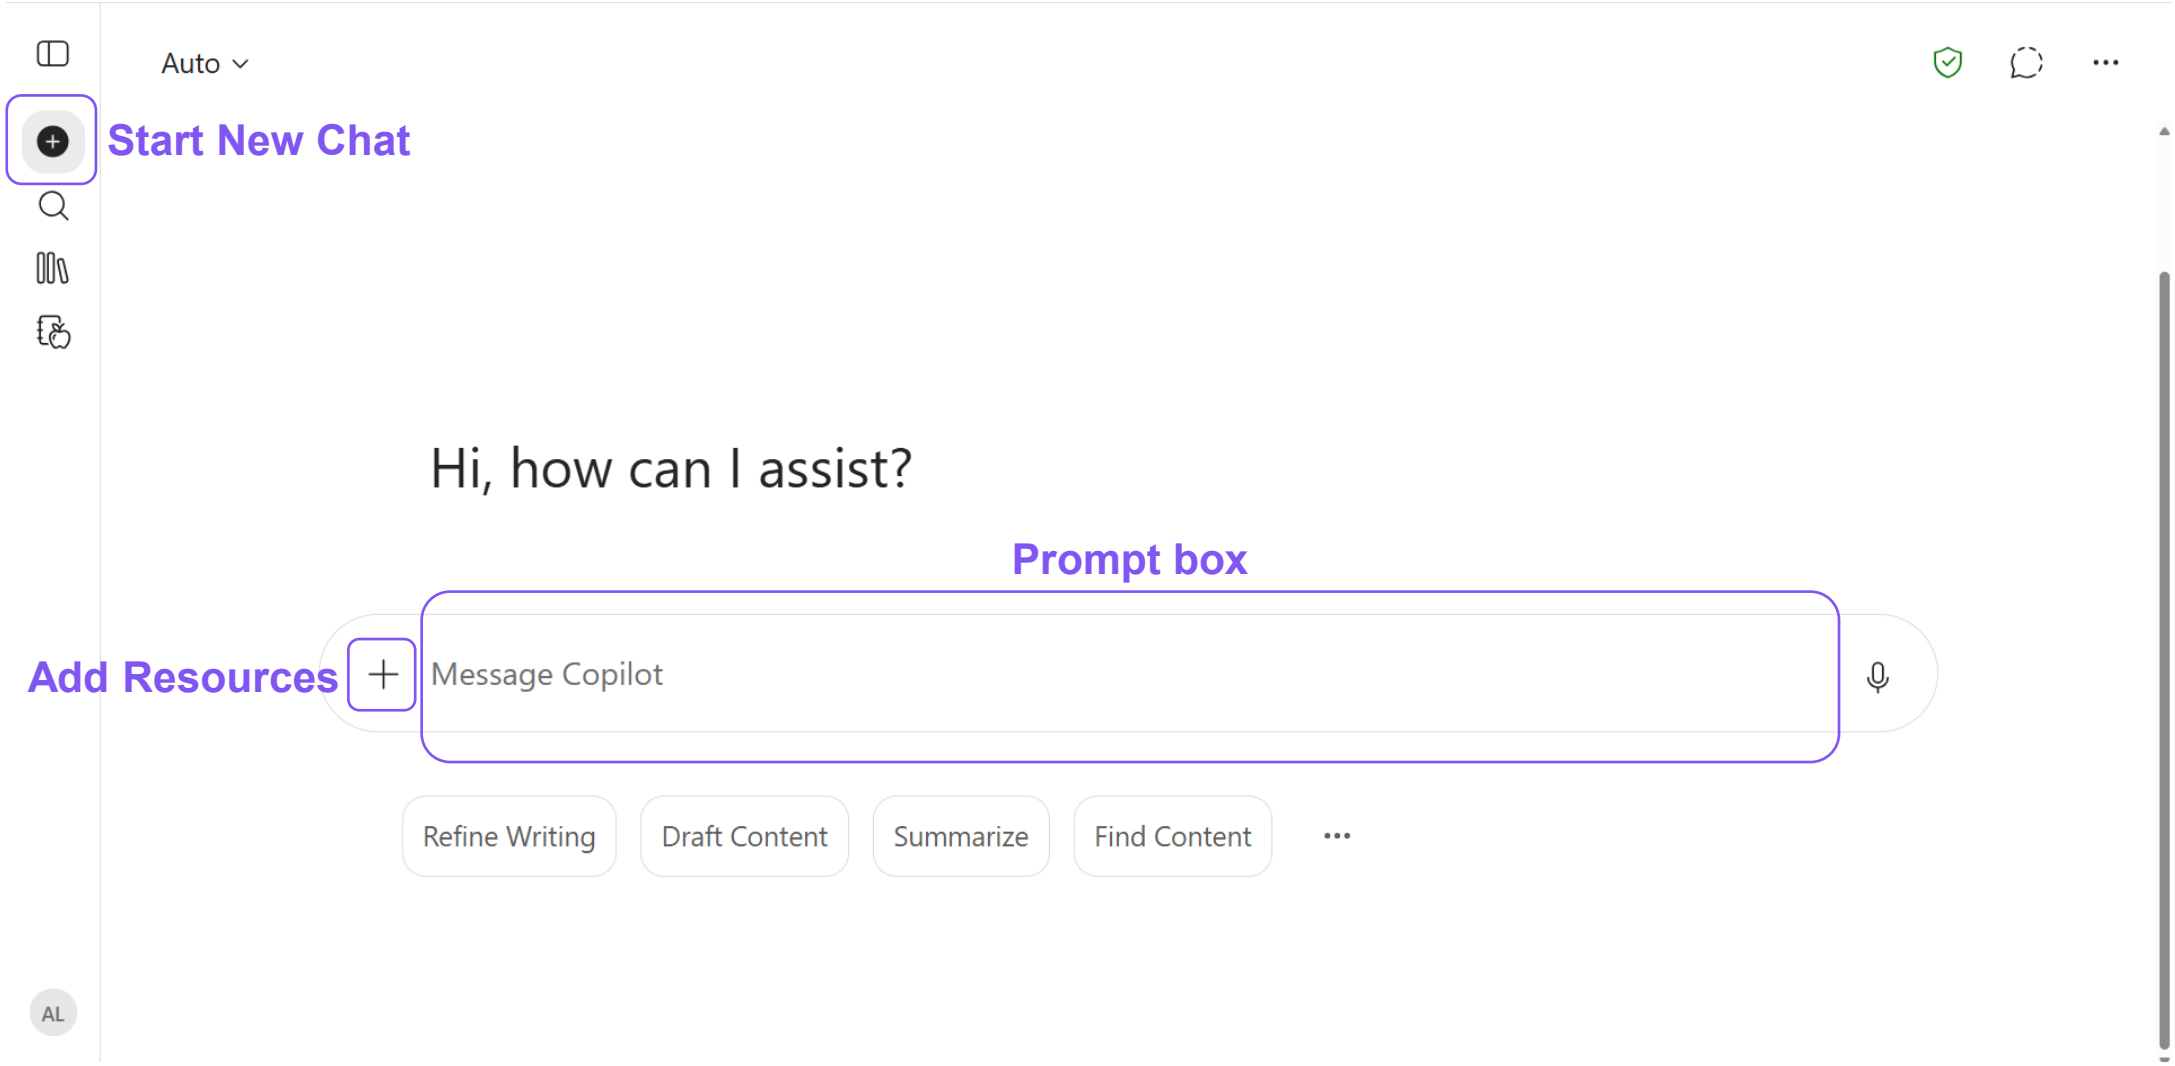

Gemini

- Research, information discovery, and productivity across Google services
- Used by individuals and organisations using Google Workspace

Effective Prompting

The 5 Elements of Effective Prompts

Role

Who the AI should act as (e.g., Senior Maintenance Specialist, Copywriter, Data Analyst).

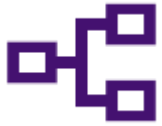

Task

What the AI should specifically do (e.g., diagnose issue, draft report, summarise data).

Guardrails

Rules, boundaries, and limitations (e.g., maximum length, prohibited jargon, safety constraints).

Format

How the output should be visually structured (e.g., table, image, bulleted list).

Tone

How the response should sound (e.g., authoritative, concise, empathetic, formal).

Example Prompts

Role: Act as an experienced home cook who specialises in simple, affordable meals.

Task: Help me plan a tasty dinner for four people using chicken, potatoes and vegetables.

Guardrails: Keep the total cost under $25, use ingredients available at Woolworths or Coles, and make sure preparation and cooking take no more than 45 minutes.

Format: Provide a recipe with ingredients, quantities, step-by-step instructions and an estimated cost.

Tone: Friendly, practical and easy to follow for someone with basic cooking skills.

Role: Act as an experienced Australian travel adviser who specialises in affordable short breaks.

Task: Help me plan a relaxing two-night weekend getaway for a couple, departing from Albury by car.

Guardrails: Keep the total budget under $600, including accommodation, meals and activities. Limit driving to three hours each way and don't invent prices or availability.

Format: Present a day-by-day itinerary with suggested activities, accommodation options and estimated costs.

Tone: Warm, enthusiastic and conversational, with practical suggestions rather than sales pitches.

Activity: Turn a Basic Prompt into an Effective Prompt

Using the Prompt Formula, improve the following prompt:

“Help me sell my chilli jam at the local farmers market”

1. Role: Who should the AI act as?
2. Task: What should it do?
3. Guardrails: What rules should it follow?
4. Format: How should the answer be presented?
5. Tone: How should it sound?

Activity: Turn a Basic Prompt into an Effective Prompt

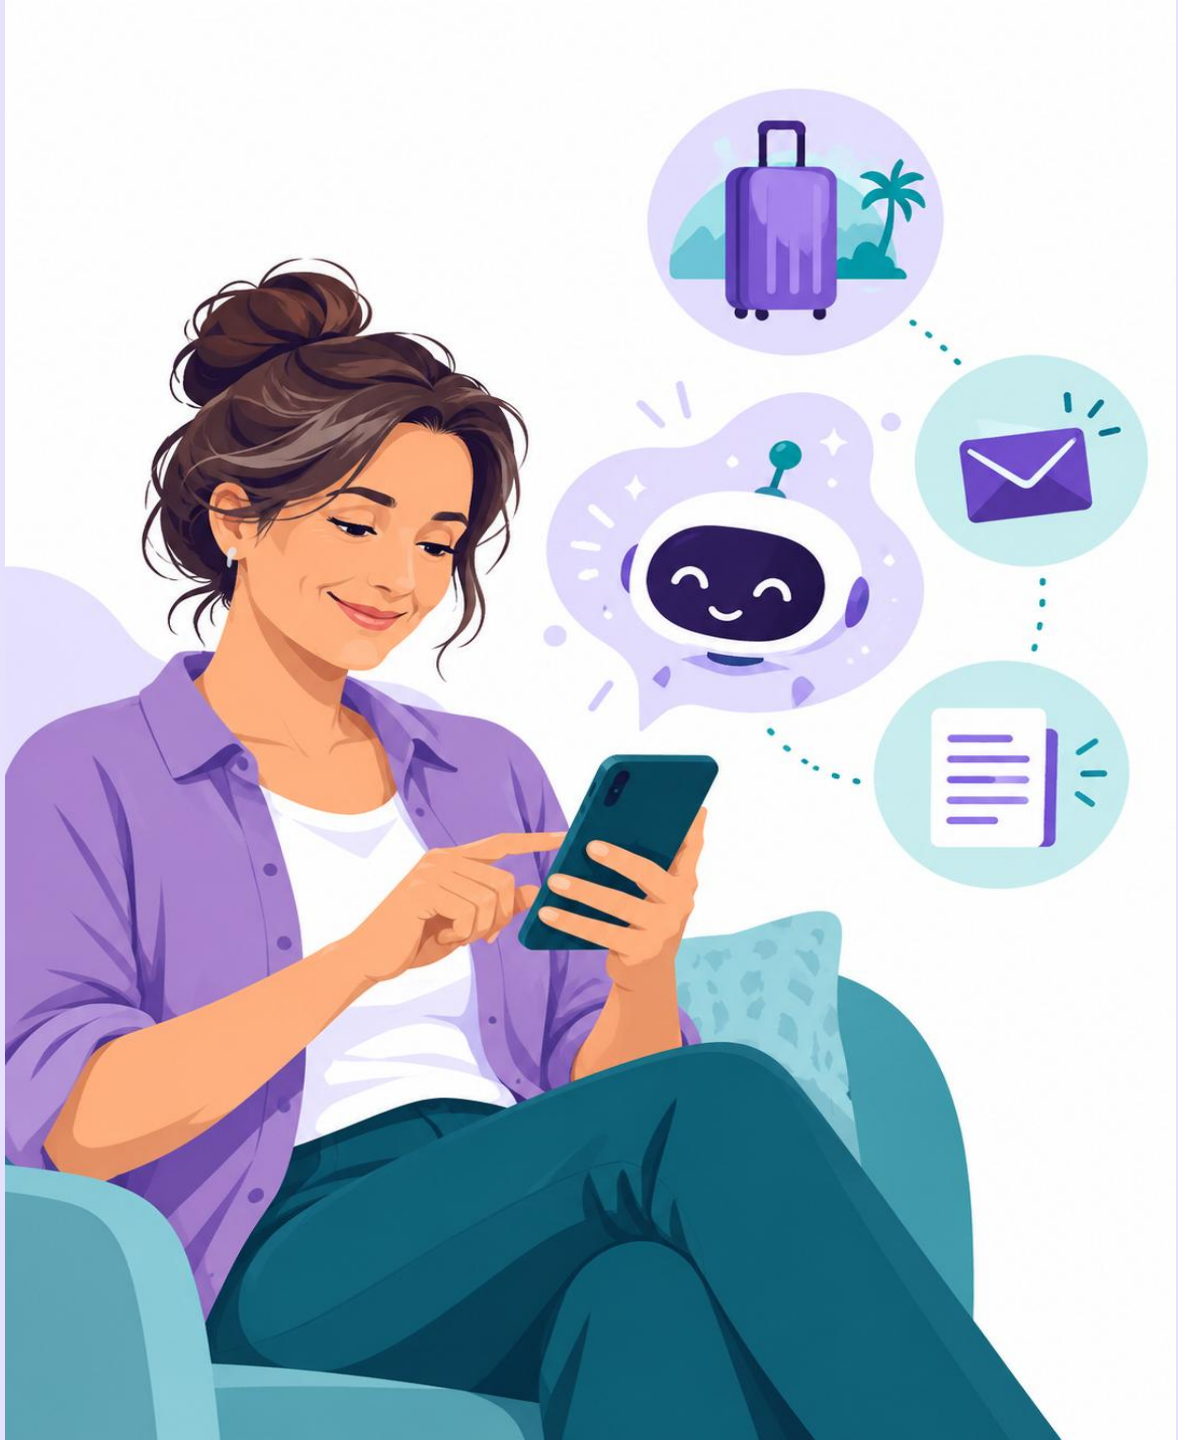

Role	Act as an experienced marketing adviser who helps small businesses sell products at local markets.
Task	Help me sell my homemade chilli jam at a local farmers market. Suggest a catchy slogan, an attractive stall sign, a 30-second sales pitch and three ways to attract customers.
Guardrails	Keep the ideas practical, low-cost and suitable for a small market stall. Don't invent claims about my product. Ask me questions if you need more details.
Format	Present your suggestions under clear headings, using short bullet points and examples I can use immediately.
Tone	Use friendly, fun, engaging and persuasive language that appeals to everyday shoppers without being pushy.

AI Application

AI in Personal Assistance

AI personal assistants help people plan holidays, write emails, understand documents, learn new skills and solve everyday problems. Using natural language, they interpret questions and provide tailored suggestions. They save time, simplify complicated tasks and make useful information more accessible, without requiring technical expertise

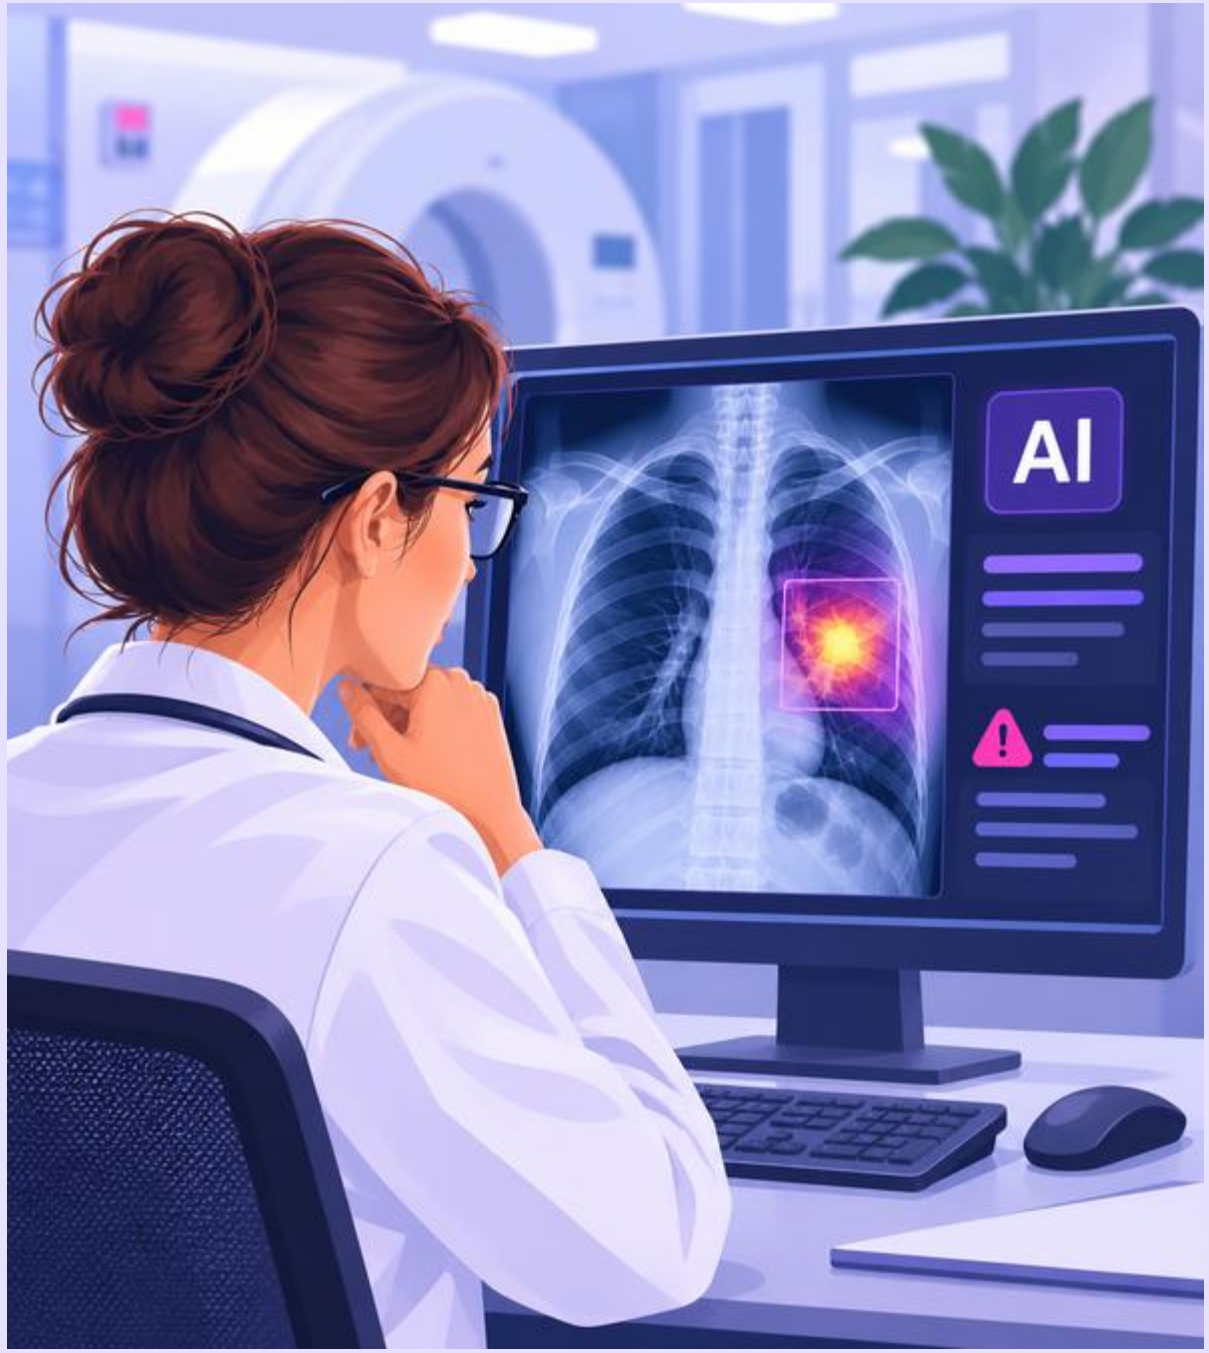

Case: CBAs Aussie AI assistant, Ceba, helps customers manage everyday banking. Available 24/7 through the CommBank app, it answers questions, helps locate statements, assists with banking tasks and connects customers to human support when needed.

AI in Medical Diagnosis

AI helps doctors detect diseases by analysing medical images such as X-rays and CT scans. Trained on large collections of scans, it identifies patterns and abnormalities that may be difficult to spot. It acts as a second pair of eyes, supporting faster diagnoses and better-informed medical decisions.

Case: Sydney-based harrison.ai has developed AI technology that helps radiologists detect abnormalities in chest X-rays and brain CT scans. Originally marketed as Annalise.ai, its technology is used in hospitals and radiology clinics across Australia and internationally, helping doctors identify potential medical problems more quickly.

30 minutes Break

Creating Content with AI

Case Introduction

Bring Sydney to the Murray!

The Albury-Wodonga and Murray River region has plenty to offer visitors, from stunning scenery and outdoor adventures to wineries, food, history and country hospitality.

But how can we encourage more Sydney residents to choose this region for their next holiday or long weekend?

Your challenge is to use AI to help promote the region by:

- Creating a one-page travel article for the Qantas domestic in-flight magazine.
- Developing engaging content for Facebook or Instagram.
- Exploring ideas for an attractive tourism website.

Write Prompt for the Article using AI

Your task: Create a one-page travel article for the Qantas domestic in-flight magazine that inspires Sydney residents to visit the Albury-Wodonga and Murray River region.

Use Generative AI to write your article, applying the five prompting skills you have learnt today:

- **Role:** Who should the AI act as?
- **Task:** What exactly should it create?
- **Guardrails:** What rules and limitations should it follow?
- **Format:** How should the article be structured?
- **Tone:** How should it sound to potential visitors?

Checkpoint: Human Review

Before publishing your AI generated travel article, check the following:

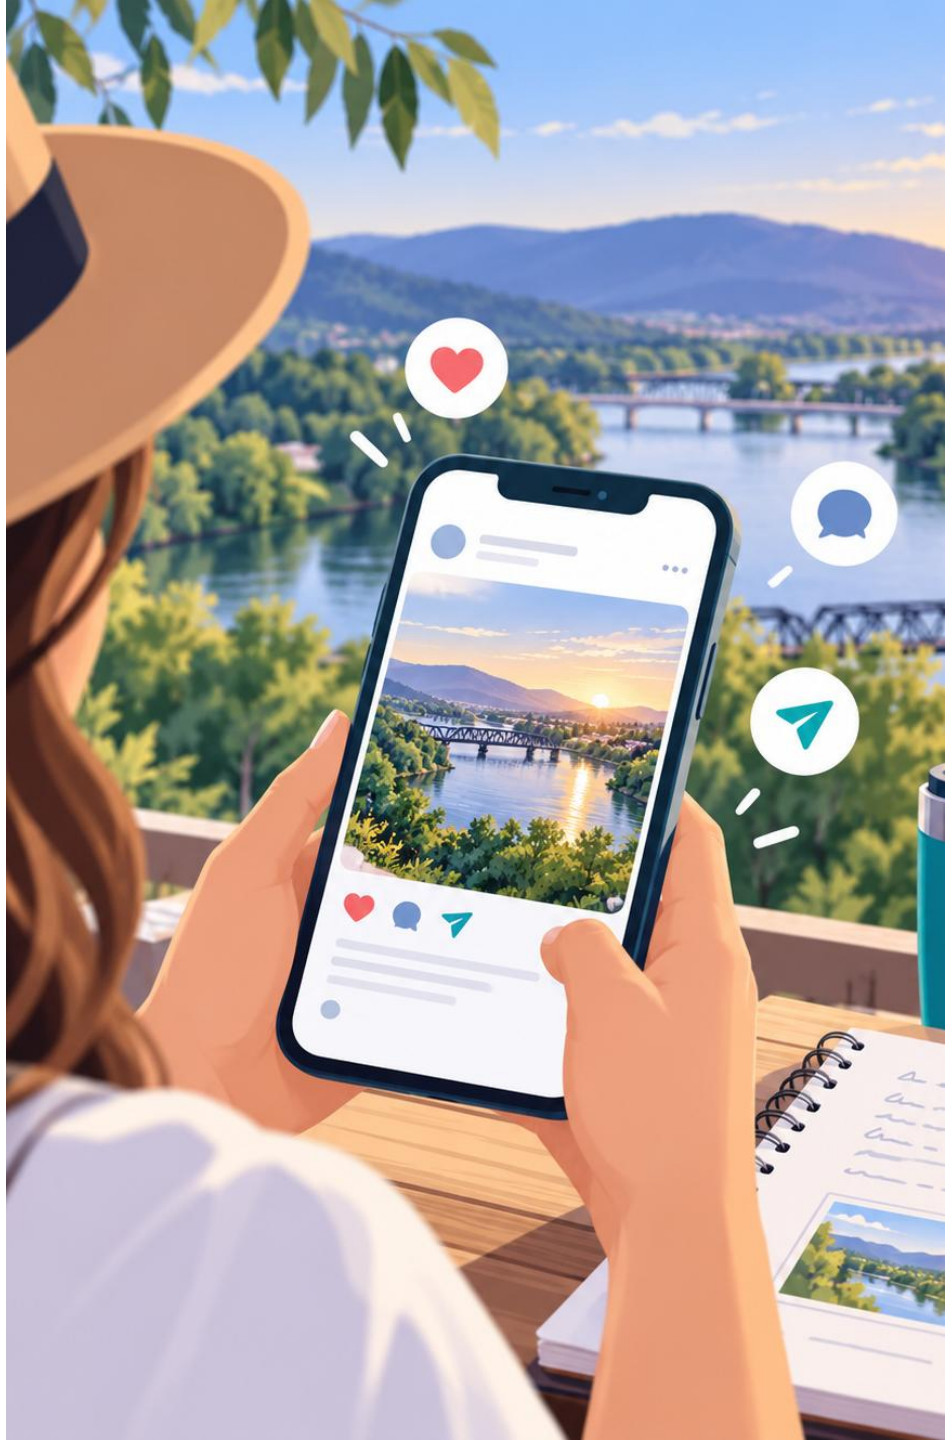

Checkpoint	What to Audit before hitting send
Accuracy	Are attractions, locations and activities described correctly? Have you checked the facts?
Tone	Is the article engaging, welcoming and persuasive to Sydney travellers?
Local Relevance	Does it highlight what makes Albury–Wodonga and the Murray region special?
Details	Are travel times, distances, prices and opening hours accurate and current?
Quality	Is the writing clear, interesting and free from repetition or obvious AI clichés e.g. ‘m’ dashes?
Final Steps	Check spelling, grammar and layout. Make any improvements before publishing.

Create a Social Media Post

Your task: Turn your travel article into an engaging Facebook or Instagram post that encourages Sydney residents to visit the Albury-Wodonga and Murray River region.

Using Gen AI and your prompting skills:

- **Choose your platform:** Facebook or Instagram.
- **Adapt the content**: Make it shorter, punchier and more relevant for the platform.
- **Grab attention:** Create an engaging opening that makes people want to read more.
- **Encourage action**: Include a call to action and relevant hashtags.
- **Review:** Make sure the post is accurate, appealing and suitable for your audience.

Generate a Marketing Image

Your challenge: Use Generative AI to create an eye-catching tourism image that inspires Sydney residents to visit the Albury–Wodonga and Murray River region.

- **Subject:** What attractions or experiences will you highlight?
- **Audience:** What would appeal to Sydney travellers?
- **Style:** Photograph, illustration, poster or something creative?
- **Mood**: Relaxing, adventurous, exciting or welcoming?
- **Format:** What size and layout would work best for social media?

Remember: Review your image, refine your prompt and experiment until you achieve the result you want.

AI Safety, Privacy & Ethics

Responsible AI Use

Privacy

Do not enter sensitive or confidential information into AI tools unless authorised and appropriate.

Hallucinations & Accuracy

AI sounds convincing, but it can confidently make up fake facts.

Bias

AI can reproduce biases found in its training data.

Security

AI-generated content can be misused by scammers and malicious actors.

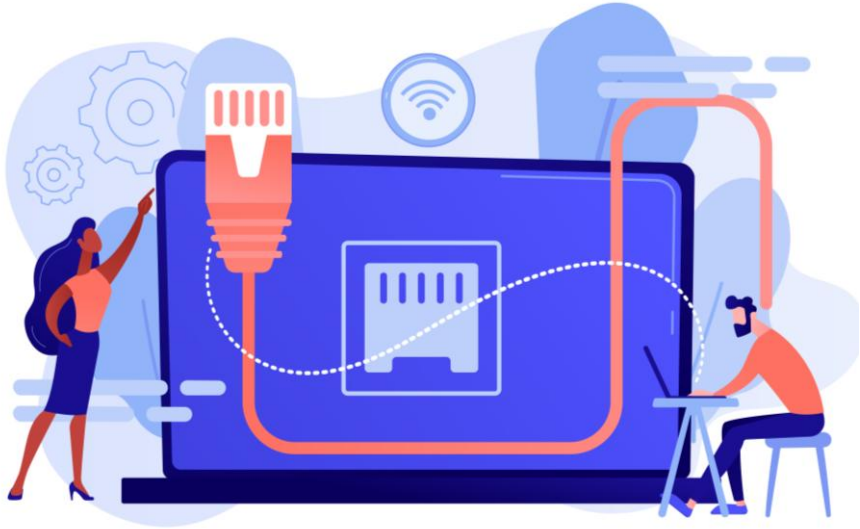

Human Responsibility

AI can assist with decisions, but responsibility remains with people.

Why Responsible AI Use Matters

AI is a powerful assistant, but accountability always stays with people.

Case: In September 2025, an Australian lawyer was penalised after submitting court documents containing false legal citations generated by AI. The citations appeared legitimate but did not exist, as AI can produce convincing information that is inaccurate or entirely fabricated.

Privacy and Intellectual Property when Using AI

AI tools may reuse or learn from data unless you prevent this by restricting your privacy settings.

This means you **should not upload personal information about yourself or others,** unless you have set up the necessary privacy settings. These settings vary for different AI tools.

Personal information includes content that clearly identifies a person, like their name, ID, medical information, date of birth, and phone number. It also includes information that could identify a person when combined with other details or data, for example their initials combined with an address.

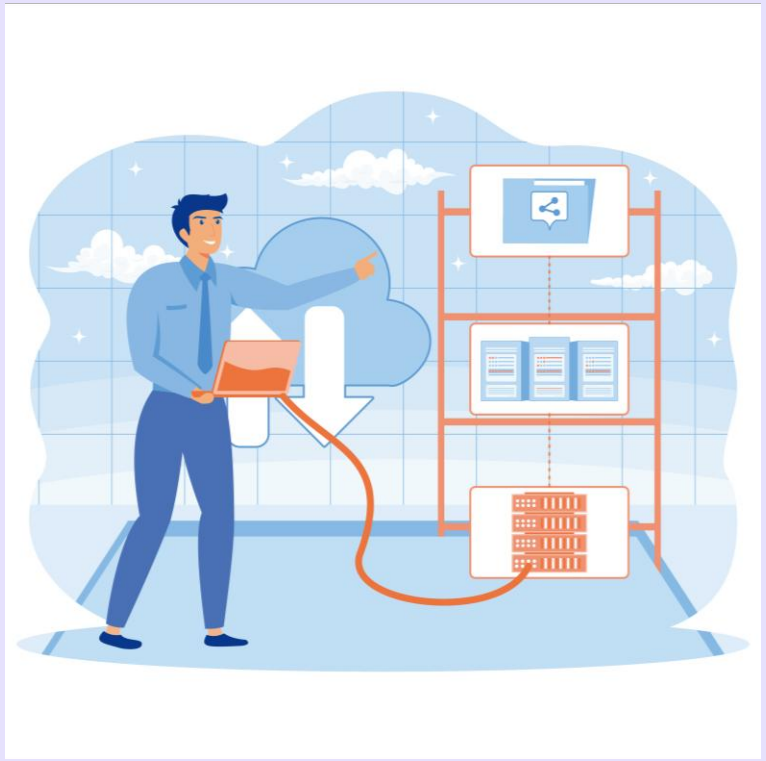

Intellectual property: Only enter your intellectual property into public AI tools if you agree it can be shared with others. Content that you have created could be re-used by the AI tool to generate content for others without giving you credit.

Group Discussion: Upload or Not Upload?

For each of the following examples, determine whether you should or should not upload them to a public generative AI tool:

- Your own bank statements
- A sales data spreadsheet including customer names and delivery addresses
- A staff member's attendance record
- Sales data spreadsheet with no customer information included other than delivery postcode

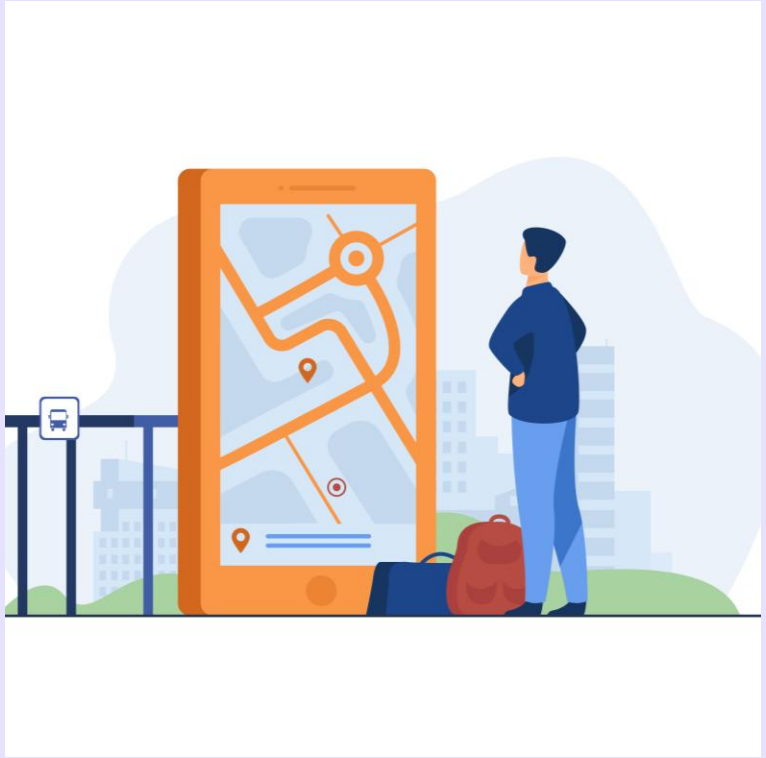

Wrap-Up & Next Steps

Activity: One Thing I Will Try

Complete the following phrases:

1. Before today, I thought AI was...
2. Now I think AI is...
3. One thing I could use AI for is...
4. One thing I will be careful about is...

Q&A and Next Steps
